--SEE OFFICE ACTION ON THE FOLLOWING PAGES--

Applicant's election with traverse of Group I and water as first and second solvents in the reply filed on 8/19/04 is acknowledged. The traversal is on the ground(s) that the inventions are not independent. This is not found persuasive because the patentability of the method steps is not dependent on the composition made.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1, 2, 6-9 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for vitamin E TPGS and Al TRI-SEC-BUTOXIDE, does not reasonably provide enablement for any compound possessing amphipathic properties and any alumina source. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. Applicants demonstrate efficacy with the above cited compounds. No amphipathic compound other than vitamin E TPGS is disclosed. Further, it does not appear that Alumina itself will produce the claimed mesoporous composition.

Claims 1-5, 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 "aging" is vague. There is no time limit specified.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Nowhere do applicants specify amounts or ratios of ingredients.
